

VMCUT SERIES CUTTER HOLDERS

VMCUT SERIES CUTTER HOLDERS

FEATURES

Cutter-holder tools made of PVC for cutting Ø75 round semi-rigid pipes (cod. VMCUT75) or Ø90 (cod. VMCUT90). The tool should be used in conjunction with a cutter, commonly purchased at a hardware store, having a 17-18 mm wide blade. The cutter blade is inserted into a slot in the cutter holder up to the stop point so that its cutting tip protrudes.

The wrap-around and protuberance shape (entering the "throat" of the pipe) of the tool allows the cutter to be easily led along the throat itself for quick and precise cutting.

The cutter can be easily removed finished cutting operations and its blade can be renewed/changed, being completely independent of the cutter holder. Patented.

TECHNICAL SPECIFICATIONS
